**The Ultimate
Safety Breaker**

TABLE OF CONTENTS

1. Ratings and Specifications1-1

Molded Case Circuit Breakers

① Fixed thermal and fixed magnetic MCCBs1-2

② Adjustable thermal and adjustable magnetic MCCBs1-3

③ Switch-disconnectors1-4

2. Mounting and Connection2-1

① Type of connections and mountings2-2

List of connecting type2-2

Connecting parts2-3

② Compression terminals2-4

③ Terminal screw sizes and standard torques2-6

④ Insulation distance from the line side2-7

⑤ Reverse connection2-8

⑥ Lists of breaker mounting screws2-8

3. Accessories3-1

① Internally mounted accessories3-2

1. Connection diagrams and terminal numbers3-2

2. Possible combinations3-2

3. Ratings and operation data of auxiliary and alarm switches3-3

4. Shunt trip device (SHT)3-3

5. Undervoltage trip device (UVT)3-4

② Externally mounted accessories3-6

1. Motor operators (MC)3-6

2. Toggle holder (HH) and toggle lock (HL)3-9

3. External operating handles3-10

(1) Breaker-mounted (HB) for E1003-10

(2) Breaker-mounted (field installable)(HB) for S160, E250, S2503-12

(3) Door-mounted (depth adjustable) (HS) standard type3-16

(4) Door-mounted (depth adjustable) (HP) ordinal type3-20

4. Interpole barriers (BA)3-25

5. Terminal covers CF/CR/CS3-26

(1) CF for front-connected breakers3-26

(2) CR for rear-connected and plug-in breakers CS for front-connected breakers with cable clamps3-27

6. Terminal blocks (TF)3-28

7. Mechanical interlock3-30

• Slide interlock (MS)3-30

8. Door Flange (DF)3-33

4. Characteristics and Outline Dimensions4-1

• E100-SF4-2

• E160-SF4-4

• S160-SCF, S160-SF4-6

• E250-SF, S250-SF4-8

• S160-SCJ, S160-SJ4-10

• E250-SJ, S250-SJ4-12

• S160-SN4-14

• S250-SN4-16

FEATURES

Saving space and saving money !

No.4

Operation in pollution degree 3 to IEC standard

No.1

Compact size: W75 H130 D68;
and high breaking capacity: 40kA
415V (S160-SF/SJ)

No.6

IP20 protection for the terminals
and IP30 protection for the front cover
with toggle (with terminal covers)

No.9

Two alarm
switches can be
easily installed

No.8

Practical internal
accessories can
be installed with
one touch

- auxiliary switch
- alarm switch
- shunt trip
- undervoltage trip

No.10

Secure accessory cover
retains nameplate

No.7

Unique accessory
cover opens with
only one screw

No.5

Suitable for isolation
with positive contact
indication

No.2

Huge adjustment
range for overload
protection: 63 to 100%
Dial cover can be
sealed.
(Adjustable thermal
MCCBs)

No.3

Unlimited performance
when reverse-connected

VARIED TERMINATIONS

cable clamp

straight extension bar

spread extension bar

cable clamp for
aluminum
conductors

front connections

Remarks	Connect compression terminals or flat bars directly to breaker terminals.	Extension bars are attached to breaker terminals. Connect compression terminals or flat bars to the extension bars.	Cable clamps are attached to breaker terminals. Connect wires directly to cable clamps.	- Flat bar studs will be factory installed in the horizontal position unless otherwise specified. - For E250, S250, the flat bar studs in the vertical position are available on request. Please select a position code from those shown in the table below:<table><tr><th rowspan="2">Position code</th><th colspan="2">Position of flat bar studs</th></tr><tr><th>Line side</th><th>Load side</th></tr><tr><td>RC-A</td><td>Vertical</td><td>Horizontal</td></tr><tr><td>RC-B</td><td>Horizontal</td><td>Vertical</td></tr><tr><td>RC-C</td><td>Vertical</td><td>Vertical</td></tr><tr><td>RC-D</td><td>Horizontal</td><td>Horizontal</td></tr></table> - For S160, the studs are horizontal direction only.	Position code	Position of flat bar studs		Line side	Load side	RC-A	Vertical	Horizontal	RC-B	Horizontal	Vertical	RC-C	Vertical	Vertical	RC-D	Horizontal	Horizontal	
Position code	Position of flat bar studs																					
	Line side	Load side																				
RC-A	Vertical	Horizontal																				
RC-B	Horizontal	Vertical																				
RC-C	Vertical	Vertical																				
RC-D	Horizontal	Horizontal																				

See page 2-6 for dimensions and tightening torques of terminal screws.

Notes:

● : Standard. This configuration used unless otherwise specified.

○ : Optional standard. Specify when ordering.

▲ : Semi-standard.

△ : Custom-built. Contact us for details.

— : "no" or "not available".

①. See page 2-3 for details.

Connecting parts

There are the following connecting/mounting hardware available as options:

1. Extension bars for front connection

Type	Number of poles	Applicable breakers	Min order qty	Constituent parts			Remarks
				Extension bar	Screw B	Screw C	
T2FB12L2SH	2	S160-SCF, S160-SF, S160-SCJ, S160-SJ, S160-SN	1/2 ①	2	2	2	
T2FB12L3SH	3			3	3	3	
T2FB12L4SH	4			4	4	4	
T2FB12L2SB	2	S160-SCF, S160-SF, S160-SCJ, S160-SJ, S160-SN	1	4	4	4	
T2FB12L3SB	3			6	6	6	
T2FB12L4SB	4			8	8	8	
T2FB25L3WH	3	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	1/2 ①	3	3	3	
T2FB25L4WH	4			4	4	4	
T2FB25L3WB	3	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	1	6	6	6	
T2FB25L4WB	4			8	8	8	
T2FB25L2SH	2	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	1/2 ①	2	2	2	
T2FB25L3SH	3			3	3	3	
T2FB25L4SH	4			4	4	4	
T2FB25L2SB	2	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	1	4	4	4	
T2FB25L3SB	3			6	6	6	
T2FB25L4SB	4			8	8	8	

● See page 2-6 for screws B and C.

Note ①: Two sets, one for the line side and one for the load side, are required per breaker.

2. Frat bar stud for rear connection

Type	Number of poles	Applicable breakers	Min order qty	Constituent parts			Remarks
				Stud bar	Screw D	Screw E	
T2RP12L2S	2	S160-SCF, S160-SF, S160-SCJ, S160-SJ, S160-SN	1	4	4	4	
T2RP12L3S	3			6	6	6	
T2RP12L4S	4			8	8	8	
T2RP25L2S	2	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	1 ①	4	4	4	
T2RP25L3S	3			6	6	6	
T2RP25L4S	4			8	8	8	

● See page 2-6 for screws D and E.

Note ①: The studs can be rotated to four angular positions: 0 (horizontal), 45, 90 (vertical) and 135 degrees.

						CB150-10	

Notes:

- Commercially made compression terminals can be used (refer to  boxes)
 - R/RD : JIS-compliant
 - CB : JEM 1399-compliant
 - AMP : Made by Nippon AMP Co., Ltd.
 - JST : Made by Japan Solderless Terminal Manufacturing Co., Ltd.
 - NTK : Made by Nippon Tanshi Co., Ltd.
 - NTM : Made by Nichifu Terminal Industries Co., Ltd.
 - MELEC : Made by Shanghai JiaMeng Electrical Equipment Co., Ltd.
- Compression terminals in  box cells are made by us at Terasaki. They are available from us or our authorized agents.
- Compression terminals enclosed in parentheses are to be used as the lower terminal when two terminals are connected.

Connection (two terminals)

If a shortage of insulating occurs between the mounting plate and a terminal, use a recommended taping or insulator.

Terasaki made compression terminals are used (refer to  box)

60-2BA

80-3BA

100-3BA

Connection (one electric cable)

If a shortage of insulating occurs, use a recommended taping or insulator.

(Make connection so that the screw heads face toward the mounting surface.)

Connection (two electric cables)

If a shortage of insulating occurs, use a recommended taping or insulator.

(Make connection so that the screw heads face toward the mounting surface.)

The insulation distance between the breaker and earthed metal parts and insulators shown in the table on the next page must be maintained to prevent arcing faults occurring due to conductive ionised gas. In addition, completely cover exposed conductors, to their roots at the breaker or to below the height protected by interpole barriers, on the line side of the breaker using insulation tube or tape, in order to provide positive protection against short circuit or ground fault due to metal chipping, surge voltage, dust particles or salt. Be sure to install the interpole barriers supplied with the breaker.

- A . Distance from lower breaker to exposed live part of upper breaker terminal (front connection) or distance from lower breaker to end face of upper breaker (rear connection).
- B1 . Distance from end face of breaker to top plate.
- B2 . Distance from end face of breaker to insulation plate.
- C . Gap between breakers.
- D . Distance from side of breaker to side plate (earthed metal).
- E . Dimension of insulation over exposed conductors.

2

Mounting and Connection

Molded Case Circuit Breakers

4 Insulation distance from the line side

Insulation distance, mm (AC 460 V or less) Note ①

Molded Case Circuit Breakers

Breaker	A Note ②	B1	B2		C	D	E
E100-SF	30	10	10	*	Possible to set close	25	Not less than the length of the bare live part Note ③
E250-SF, E250-SJ	50	40	40	*	Possible to set close	50	Not less than the length of the bare live part Note ③
S160-SCF, S160-SF, S160-SCJ, S160-SJ	50	50	10	*	Possible to set close	25	Not less than the length of the bare live part Note ③
S250-SF, S250-SJ	50	50	40	*	Possible to set close	50	Not less than the length of the bare live part Note ③

Notes:

①. Required to allow free and uninterrupted flow of arc gases. Ensure additional clearance or insulation distance if required to perform wiring, barrier installation or electrical work or to meet the need for more insulation distance between bare live parts and grounded metal members in a switchboard or the like.

②. The figures are for lower breakers.

③. For front connection breakers, insulate all exposed conductors of the line side until the breaker end. If interpole barriers are packed, be sure to use the barriers; more over, insulate all exposed conductors by insulating tape or the like so that the tape overlaps with the barriers.

*. If using extension bars (optional), ensure the insulation distance specified for the application.

Notes:

①: The two-pole type breaker obtained by modifying a three-pole breaker by removing the conductive part of its central pole is regarded as the same as the three-pole type.

3. Ratings and operation data of auxiliary and alarm switches

(1) Ratings of AX and AL

• The applicable load of the switch shall be no larger than the rating and no smaller than the minimum load.

Type of breaker	Standard							For microload ①		
	AC (V)			DC (V)			Minimum load	DC (V)		Minimum load
	Voltage (V)	Current (A)		Voltage (V)	Current (A)			Voltage (V)	Current (A)	
		Resistive load	Inductive load ②		Resistive load	Inductive load ②				
E100-SF	480	—	—	250	0.2	0.03	DC6V 100mA DC24V 25mA	125	0.1	DC6V 5mA DC24V 1.25mA
	250	3	2	125	0.4	0.05		30	0.1	
	125	3	2	30	3	2				
S160-SCF, S160-SF, S160-SCJ, S160-SJ, S160-SN E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN	480	—	—	250	—	—	DC15V 100mA	30	0.1	DC5V 1mA
	250	3	2	125	0.4	0.05				
	125	3	2	30	3	2				

Note: ① This is a custom-made product. When ordering for this product, specify that it is intended for minute load use.

Note: ② The inductive load means power factor of no smaller than 0.4 and time constant of no larger than 7 ms.

(2) Operation of AX and AL

Switch	Breaker status	[ON]	[OFF]	[TRIP]
Auxiliary switch (AX) status		11/AXc-14/AXa "Closed" 11/AXc-12/AXb "Open"	11/AXc-14/AXa "Open" 11/AXc-12/AXb "Closed"	11/AXc-14/AXa "Open" 11/AXc-12/AXb "Closed"
Alarm switch (AL) status		91/ALc-94/ALa "Open" 91/ALc-92/ALb "Closed"	91/ALc-94/ALa "Open" 91/ALc-92/ALb "Closed"	91/ALc-94/ALa "Closed" 91/ALc-92/ALb "Open"

4. Shunt trip device (SH)

Ratings of SHT

Type of breaker	Peak exciting current, A					
	Rated voltage	AC (V)		DC (V)		
		100-115	200-480	24	48	100-115 200-230
E100-SF		3.4	0.83	1.6	0.71	0.4 0.16

Type of breaker	Peak exciting current, A						
	Rated voltage	AC (V)			DC (V)		
		100-120	200-240	380-450	24	48	100-120 200-240
S160-SCF, S160-SF, S160-SCJ, S160-SJ, S160-SN E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN		0.014	0.014	0.0065	0.03	0.03	0.011 0.011

Notes:

(1) The permissible voltage range is from 85% to 110% of the rated voltage for AC or 75% to 125% thereof for DC.

Ensure that the voltage does not drop exceeding the permissible voltage range when SHT is actuated.

(2) Breaker contacts usually start opening within 30 ms after the rated voltage is applied to the breaker.

1. Motor operators (MC)

Motor driven type

Ratings and Specifications

T2MC25L	
Type of breaker	E250-SF, S250-SF, E250-SJ, S250-SJ, S250-SN
Rated operational voltage ①	● AC100-110V ● AC200-220V ● AC230-240V ● DC24V ● DC48V ● DC100-110V ● DC200-220V
Peak steady-state/ starting current, A ②	AC100-110V 4.5/8
	AC200-220V 4/8
	AC230-240V 3.5/7
	DC24V 18/26
	DC48V 12/18
	DC100-110V 2.2/6
	DC200-220V 2.2/5.5
Operation method	Motor driven (direct drive system)
Operating time, s at rated voltage	ON 0.1
	OFF/RESET 0.1 ③④
Operating switch ratings	100V 0.1A (Open voltage/current: 44 V/4 mA) ⑤
Power supply required	300VA or higher
Dielectric withstand voltage (for one minute)	AC1500V (AC 1000 V for DC 24/48 V)
Weight	1.4kg

Notes:

- ① : Permissible operating range is 85 to 110%. A power transformer is available as option for AC380V or AC400-460V.
- ② : The currents shown are the maximum values at the maximum rated operational voltage.
- ③ : The operating time is the value when the rated operational voltage is supplied.
Allow a longer time for the motor operator to complete the operation.
- ④ : The motor operator is of a short time duty. Do not subject it to more than 10 continuous ON-OFF operations. If this occurs, allow the motor operator to cool for at least 15 minutes.
- ⑤ : When the rated operational voltage is DC24V the open voltage will be DC22V.

Features

★ Installation and removal ease

Simply rotate two knobs allows the motor operator to be installed on or removed from the breaker.

★ High-speed, stable actuation

The operating time as short as up to 0.1 second makes it possible to use the motor operators for synchronized closing of breakers.

★ Silent operation

T2MC25L use a direct drive system, providing operational silence.

★ “Lock-in off” capability

This capability allows the breaker to be padlocked in the OFF state. Up to three padlocks with a 5 to 8 mm hasp diameter can be used. Padlocks are not supplied.

Motorized operation

The motor operator has an input-signal self-hold circuit; closing the ON or OFF switch (see circuit diagrams shown below) momentarily allows activating the motor operator. To reset the tripped breaker to the OFF position, close the OFF (RESET) switch. The voltage presence LED indication is on when the power is supplied to the motor operator.

■ Auto reset feature (optional)

The auto reset feature allows the breaker to be automatically reset approx. 1.5 seconds after the breaker trips open. This option contains auto-reset switches and does not require to use auxiliary or alarm switches installed in the breaker.

Note : that after the thermal OCR trips a thermal-magnetic breaker, the breaker cannot be immediately closed though it can be auto-reset.

Wait for a few minutes after the tripping and provide a close signal to the breaker.

This option resets the tripped breaker automatically, regardless of the cause of the tripping.

Manual operation

Pull the operating handle out. Rotating the handle counterclockwise turns ON the breaker and clockwise turns OFF or resets the breaker.

Operation precautions

1. Ensure that the actual operation voltage ranges from 85% to 110% of the rated one.
2. Use operation switches whose ratings and power capacity is as specified in the “Ratings and Specifications” table on the previous page.
3. Use noise filters if the control power supply of the motor operator is shared by peripheral devices. Otherwise, power supply noise may cause malfunction of the peripheral devices.
4. When the motors are used in conjunction with the mechanical interlock the electrical interlock should be provided between the motors in order to avoid the simultaneous closing. The followings are the available electrical interlock cables.

Interlock cables Order codes	Length	Remarks
T2MM25L05	500mm	for the electrical interlock between T2MC12 and T2MC25/25L.
T2MM25L15	1500mm	
T2MM40L06	600mm	for the electrical interlock between T2MC40 and T2MC80.
T2MM40L21	2100mm	
T2MM40S06	600mm	for the electrical interlock between T2MC40 and T2MC12/25/25L.
T2MM40S21	2100mm

Series/type of breaker	E100-SF	
Rated operational voltage ①	● AC100-110V ● AC200-220V ● DC100V ● DC110V	
Auto reset	Optional ②	
	Non	
Peak steady-state/ starting current, A ③	AC100-110V	2.0/4.5
	AC200-220V	1.0/2.0
	DC100V	—⑥
	DC110V	—⑥
Operation method	Motor driven	
Operating time, s at rated voltage	ON	1.2
	OFF/RESET	0.85 ④ ⑤
Operating switch ratings	250V, 5A	
Power supply required	100 VA or higher	
Dielectric withstand voltage (for one minute)	AC1000V	
Weight	1.8	

Notes:

- ① Ensure that the actual operation voltage is within the following range: 85% to 110% of the AC rated voltage, or 75% to 110% of the DC rated voltage. In case the rated operation voltage is AC 380 V or AC 400 to 460 V, optional power supply transformers are available on request.
- ② Auto reset require to use auxiliary switch (1b) installed in the breaker. If the number of auxiliary switches is insufficient, actuate an external relay via an auxiliary switch (1a) and use the relay contact (1b) for auto reset.
- ③ The currents shown are the maximum values at the maximum rated operational voltage.
- ④ The operating time assume the motor operator is supplied with the rated operation voltage. Longer operating time will be required under actual operating conditions.
- ⑤ The motor operator is short-time rated. The number of continuous switching (ON-OFF) cycles must not exceed 10. After any 10 continuous switching cycles, provide a pause of at least 15 minutes to the motor operator for cooling.
- ⑥ Can be custom-made on request. The outline dimensions of the motor operator will be larger. An auto-reset switch cannot be used. Contact us for details.

Control circuit diagrams of motor operators

Motorized Operation

Breaker ON

Operating the ON switch energises the motor which turns ON the breaker. When the breaker is energised the limit switch operates to de-energise the motor.

Note: This is not a self-holding type. Gives a signal exceeding the operating time.

Breaker OFF

Operating the OFF/RESET switch energises the motor which turns OFF the breaker. When the breaker is energised the limit switch operates to de-energise the motor.

Note: This is not a self holding type. Gives a signal exceeding the operating time.

Breaker RESET

Operate the OFF/RESET switch to reset the tripped breaker. When the breaker is reset (OFF) the limit switch operates to de-energise the motor.

Note: This is not a self holding type. Gives a signal exceeding the operating time.

Automatic Reset (Optional)

The automatic reset feature can be incorporated by adding the breaker's auxiliary switch contact (b-contact) in parallel with the OFF/RESET control switch.

Note: When the cause of the trip has not been removed the ON-TRIP-RESET-ON operation is repeated. Therefore, do not use the ON operation switch which is normally closed.

Manual Operation

To operate the mechanical test facility of the motor operator pump the manual lever left and right approximately 20 times.

Note: This facility must not be used for ON load operations.

Lock in OFF position

The breaker can be padlocked in the OFF position. (padlock not supplied).

CAUTIONARY NOTES

If the motor operator is turned ON with the breaker OFF and the UVT de-energised, apply the power and complete one ON-OFF operation. (The breaker cannot be turned ON). Then complete one ON operation again (The breaker can be turned ON).

When the breaker is ON and is then tripped, the ON/OFF indicator on the motor operator will be indicating ON until the breaker is reset.

Note: The breaker's condition may differ.

Note: Allow several minutes to cool when a thermal-magnetic breaker is tripped by a thermal overload trip, then reset the breaker.

2. Toggle holder (HH) and toggle lock (HL)

Toggle holder (HH)

Simply fitting the toggle holder onto the breaker toggle disables breaker operation without using padlocks.

Toggle lock (HL)

The toggle lock is a tool that locks the breaker on or off. When an overcurrent occurs, the breaker will trip even if the breaker toggle is locked in the ON position.
(Use commercially available padlocks).

Toggle holders/toggle locks

Type of breaker	Toggle holder		Figure	Toggle lock		Figure

Notes: ①. A hole must be drilled in the breaker toggle. Please state "with toggle lock (HL)" when ordering.

3

Accessories

Molded Case Circuit Breakers

2 Externally mounted accessories

3. External operating handles

3-1. Breaker-mounted (HB) for E100

The external operating handle is a tool that allows the breaker installed in a switchboard to be operated from outside. The breaker-mounted type external operating handle is designed to be mounted directly to the breaker body.

Outer view

Breaker mounting direction

The ON and OFF positions of the handle and the positions of drilled holes in the panel do not need to be changed depending on the breaker mounting direction. The upper power supply type is standard. If a non-standard type is required, state the type when ordering.

- For a change in mounting direction, see the Operating Instructions packaged with the product.

Mounting instructions

The external operating handle has not been mounted on the breakers. For details on how to mount the handle, see the Operating Instructions packaged with the product.

[1] Mounting of external operating handle assembly

Secured to backing plate (TFJ21XH)

- Make sure that the breaker is in the OFF position.
- Put the external operating handle assembly onto the breaker in place so that the breaker toggle is engaged with the slide lever of the assembly. Secure the assembly together with the breaker to the backing plate.

Panel lock mechanism

The external operating handle keeps the panel door locked when in the 'ON' position. There are two types, RESET, Open and OFF, Open.

(1) Reset, Open (Standard type)

The handle is turned to the 'RESET/OPEN COVER' position to open the panel door.

(2) OFF, Open

The handle is turned to the OFF position to open the panel door.

Panel lock release knob

The release knob enables the panel door to be opened with the handle in the 'ON' position. To release: turn the release knob in the direction of anti-clockwise with a flat-bladed screwdriver.

[2] Installation of handle escutcheon and latch plate

- Drill holes in the panel according to the panel cutout dimensions. Sandwich the panel between the handle escutcheon and latch plate and temporarily tighten using the supplied screws.
- Close the panel. Make adjustment so that the gap between the handle assembly and handle escutcheon is even and the assembly is not inclined against the breaker.

Safety interlock (Standard)

The safety interlock prevents the breaker from turning ON as long as the panel is open. This interlock can be released using the hook lever.

Accessories

Molded Case Circuit Breakers

2 Externally mounted accessories

3. External operating handles

3-2. Breaker-mounted (field installable) (HB) for S160, E250, S250

The external operating handle is a tool that allows the breaker installed in a switchboard to be operated from outside and complies with IEC 60204-1.

The breaker-mounted type external operating handle is designed to be mounted directly to the breaker body.

Outer view

Mounting instructions

The external operating handle has not been mounted on the breakers.

For details on how to mount the handle, see the Operating Instructions packaged with the product.

[1] Mounting of external operating handle assembly

- Make sure that the breaker is in the OFF position.
 - Put the external operating handle assembly onto the breaker in place so that the breaker handle is engaged with the handle catch of the assembly.
- Tighten the screw to secure the handle assembly.

[2] Installation of handle escutcheon and latch plate

- Drill holes in the panel according to the panel cutout dimensions.
- Sandwich the panel between the handle escutcheon and latch plate and temporarily tighten using the supplied screws.
- Close the panel.
- Make adjustment so that the gap between the handle assembly and handle escutcheon is even and the assembly is not inclined against the breaker.

Breaker mounting direction

The ON and OFF positions of the handle and the positions of drilled holes in the panel do not need to be changed depending on the breaker mounting direction. The upper power supply type is standard. If a non-standard type is required, state the type when ordering.

R : Right power supply type	U: Upper power supply type (standard)	L: Left power supply type

- For a change in mounting direction, see the Operating Instructions packaged with the product.

■ Panel lock mechanism

The external operating handle keeps the panel door locked when in the 'ON' position. There are two types, RESET, Open and OFF, Open.

(1) Reset, Open (Standard type)

The handle is turned to the 'RESET/OPEN COVER' position to open the panel door.

(2) OFF, Open

The handle is turned to the OFF position to open the panel door.

● Panel lock release knob

The release knob enables the panel door to be opened with the handle in the 'ON' position. To release: turn the release knob in the direction of anti-clockwise with a flat-bladed screwdriver.

● Safety interlock (Standard)

The safety interlock prevents the breaker from turning ON as long as the panel is open. This interlock can be released using the hook lever.

■ Toggle lock mechanism

● Padlock (Standard)

This mechanism allows the breaker to be padlocked in the OFF position.

Padlocks are not supplied.

Up to three padlocks can be installed.

3. External operating handles

3-3. Door-mounted (depth adjustable) (HS) standard type

Door-mounted type external operating handles allow breakers installed in control centers or switchboards to be manually operated from outside and complies with IEC 60204-1.

This handle assembly consists of an operation mechanism section which is to be installed in the breaker body, a handle section which is to be installed in a panel and a square shaft which couples both the sections.

Outer view

Breaker mounting direction

The ON and OFF positions of the handle and the positions of drilled holes in the panel do not need to be changed depending on the breaker mounting direction.

Operation direction of handles

Rotate the operating handle clockwise to turn the breaker on.

Rotate clockwise to turn the breaker ON

■ Panel lock mechanism

The external operating handle keeps the panel door locked when in the 'ON' position. There is OFF open type only.

OFF open type

The handle is turned to the OFF position to open the panel door.

● Panel lock release button

The release button enables the panel door to be opened with the handle in the 'ON' position. To release: push the release button on the side of the operating handle with a flat-bladed screwdriver.

Type T1HS10X, T2HS25L

Type T2HS16LS00

4. Interpole barriers (BA)

Interpole barriers serve to enhance electrical insulation between poles and prevent short-circuit due to electrically conductive foreign matter. Combined use of interpole barriers and terminal covers (standard type) is not possible.

■ To be stated when ordering
Please state the type when ordering. One set contains two barriers.
Caution: Be sure to use the interpole barriers supplied with the breaker in order to prevent accidents.

Types and dimensions of interpole barriers, units in mm

Types of breakers	Interpole barrier		A	B
	Type	Code

Accessories

Molded Case Circuit Breakers

2 Externally mounted accessories

5. Terminal covers CF/CR/CS

Terminal covers prevent live parts of the breaker from being exposed to the external environment. There are three types of terminal covers available: CF for front-connected breakers, CR for rear-connected and plug-in breakers, and CS for front-connected breakers with cable clamps. Select appropriate terminal covers depending on the type and application of the breaker.

(1) CF for front-connected breakers

Plug-in mounted version

This version can be mounted simply by being plugged in the breaker body.

■ To be stated when ordering

- Please state the order codes in the table below. One set includes one terminal cover for the ON side and one for the OFF side.

Types and dimensions of terminal covers, units in mm

Molded Case Circuit Breakers

E250-SF, S250-SF

Time/Current characteristic curves

The graph illustrates the tripping characteristics of a 250A circuit breaker. The Y-axis represents Tripping Time, ranging from 0.005 to 3 hours. The X-axis represents Percent Rated Current, ranging from 100 to 5000. The shaded region indicates the range of tripping times between the minimum (Min.) and maximum (Max.) curves. Specific magnetic trip settings are indicated for 250A (880%-1320%) and 125-225A (1040%-1560%).

Figure 1 is a line graph showing the relationship between Percent current rating (Y-axis, 90 to 140) and Ambient temperature (°C) (X-axis, 5 to 55). The graph includes data for various cable sizes: 125A, 175A, 225A, 250A, 200A, and 150A. The curves show that the percent current rating decreases as ambient temperature increases, and all curves converge to 100% rating at 45°C. The label 'Calibrated temperature' is placed near the 125A curve.

Ambient temperature (°C)	125A	175A	225A	250A	200A	150A
5	125	122	120	118	115	112
15	122	119	117	115	112	109
25	118	115	113	111	108	105
35	113	110	108	106	103	100
45	100	100	100	100	100	100
55	93	93	93	93	93	93
